

Belting Leather

Architectural Product

spinneybeck

Belting Leather does what other leathers can't.

Belting Leather is a heavy weight, full grain leather that was originally developed during the Industrial Revolution to drive pulley belts and other machinery. With its thick, firm feel, this leather is 100 percent vegetable tanned and aniline dyed. The smooth, tight grain character is created from a unique blend of mimosa and chestnut and a premium selection of European raw material. Belting Leather is processed in Santa Croce, a region of Italy with a strong heritage of producing some of the finest quality vegetable tanned leathers.

Protected by a light water resistant finish, Belting Leather is suitable for a variety of applications. It can be used as an inlay on desks and tables or as straps and seat pads on custom furniture. The pliability of the product allows it to be woven, wrapped around columns, or applied to walls. Belting leather can also be custom cut, debossed, laser engraved, and layered to create decorative patterning.
