

Spotlight on UV Inhibitors

UV inhibitors are an integral part of the finishing process. The inhibitors provide added protection to help prevent premature fading caused by natural light.

The best defense against fading is keeping up on routine maintenance of the leather with a cleaner, conditioner, and protector. Leather conditioner has natural oils that help prevent the aging process of the leather and adds an additional layer of surface protection to counteract the damaging effects of UV light.

Spinneybeck leathers with UV inhibitors:

Acqua (AU)
Alaska (AL)
Amalfi (AF)
Andes (AD)
Antique (AQ)
Belting Leather (BL)
Derby (DE)
